

API Manual

HTTP route reference for the Data Management Portal

Generated on: 06/08/2026

Base: /api

Authentication: JWT HS256 (Bearer)

1. Fundamentals

All routes live under /api. Body and responses in JSON; errors carry the message in erro. Login returns a JWT token sent in the Authorization header.

```
Authorization: Bearer eyJ0eXAiOiJKV1QiLCJhbGciOiJIUzI1NiJ9...
```

Roles

Role	Can do
leitura	Query the allowed modules.
escrita	Query and maintain records.
admin	Plus users, lists, configuration and certifications.
master	Plus audit, actions on another master and delete certifications.

2. Session, users and modules

POST /auth/login — public. Authenticates and returns the token (or an e-mailed code, if MFA).

```
{ "usuario": "admin", "senha": "SenhaForte1" }
```

POST /usuarios — admin. Creates a user; accepts network login, department and position.

The governance modules share the same route set (GET/POST/PUT/DELETE /{module}). Available: acessos, bancos, mudancas, backup, restore, dicionario, integracoes, jobs, inventario.

The inventario module follows this pattern: each record is an application/DBMS (nome, banco, servidor, categoria, fabricante, versao, edicao, patch_atual, data_instalacao, fim_suporte, status, responsavel) and the patch history goes in historico_patches as JSON (date, type, version, ticket, installed by).

```
{
  "nome": "SQL Server", "banco": "ERP", "servidor": "SRVSQL01",
  "categoria": "SGBD", "versao": "2019", "patch_atual": "CU25",
  "status": "Ativo",
  "historico_patches": "[{\"data\": \"2026-03-10\", \"tipo\": \"Cumulative Update\", \"versao\": \"CU25\", \"chamado\": \"40091\", \"executor\": \"guilherme.rocha\"}]"
}
```

POST /mudancas/relatorio/email — access to the Changes module. E-mails the Changes audit Report. The PDF is built in the browser and arrives in base64; the portal validates (PDF signature, size), attaches and sends via SMTP.

3. Access Certification

Access certification history. The cross-check runs in the browser (real CSV × registered Access); these routes store and query the summary. The portal never connects to the database.

Route	Access	Does
GET /certificacoes	admin	Lists the history, newest first.
POST /certificacoes	admin	Saves a cycle summary (never the raw CSV).

POST /certificacoes/excluir-lote	master	Deletes several (ids) or all (tudo) from the history.
POST /certificacoes/email	admin	E-mails the PDF report.
DELETE /certificacoes/{id}	master	Removes a certification from the history.

4. Configuration and support

Route	Access	Does
GET /dashboard/stats	authenticated	Home screen numbers.
GET /config/projeto	authenticated	Name, logo and session.
POST /relatorios/{module}/email	module access	E-mails the module CSV.
GET /auditoria	master	Audit trail.
GET /documentacao/api	authenticated	This manual as PDF.

Documentation routes have an English version with the -en suffix.
